SELF REFLECTION VIDEO: LEADERSHIP

Student Name : Koo Xuan

Matric No. : A23CS0300

Section : 01

Team ID & name: 08 (MINDWELL ORGANIZATION - **SELF HELP SYSTEM**)

- Nurul Athirah Syafiqah binti Mohd Razali (A23CS0163)
- Muhammad Hafiz Bin Mohd Shahrudin (A23CS0130)
- Phavanee Katriya Phon - Amnuaisuk (A23CS0170)

UNIVERSITI TEKNOLOGI MALAYSIA

Introduction

In this project, my role is a member who complete the task distributed together with my team members on time. Except from this, I'm also a moderator who monitor group progress to ensure the team stayed on track to achieve our goals.

UNIVERSITI TEKNOLOGI MALAYSIA

Project Overview

The project - MindWell Self-Help System, is a mobile-based mental health management platform designed to provide accessible, user-friendly tools for self-help and diagnosis. It integrates innovative features such as personalized toolkits, motivation and rewards, and mental health literacy resources to empower users to manage their mental health independently.

Background of the project

Objectives

- **Accessibility** : Offer cost-effective, accessible mental health tools for individuals
- **Education** : Enhance mental health literacy by providing educational resources (knowledge units) curated by professionals.
- **Engagement** : Incorporate gamification features like points, badges, and avatars to motivate consistent user engagement.
- **Personalization** : Allow users to customize their experience with a tailored toolbox of mental health techniques

Target Audience

- **End Users** : Individuals seeking mental health support for self-diagnosis, progress tracking, and skill-building.
- **Mental Health Professionals** : Psychologists and consultants providing expertise and ensuring content accuracy and cultural relevance.
- **Stakeholders** : Developers, designers, and organizations involved in developing or funding mental health solutions.

Project Features

- **User Management** : User registration, login, profile customization, and password recovery.
- **Mental Health Literacy** : Access to knowledge units, bookmarking, and rating of educational resources.
- **Skill-Building Toolbox** : Tools that users can add, evolve, or remove based on their preferences.
- **Motivation and Rewards** : Points, badges, and customizable avatars to engage users and encourage participation.
- **Admin Management** : Content management by administrators, including resolving flagged issues and monitoring diagnostic trends.
- **Content Creation** : Tools for professionals to create new knowledge units tailored to user needs.

Key Stakeholders

- **Psychologists and Mental Health Advocates** : To ensure the system meets industry standards and user needs.
- **Developers and Designers** : Responsible for building a scalable and secure system.
- **End Users** : Provide feedback to improve the platform and its usability.

Development Process

The project followed an **Agile development methodology**, organized into six sprints

Sprints

01

User Management Module

Basic user management, including registration, login, and profile management.

02

Mental Health Literacy Module

Introduction of knowledge units for browsing, bookmarking, and rating.

03

Skill-Building Toolbox Module

Development of the toolbox module for personalized self-help tools.

04

Motivation and Rewards Module

Gamification features to boost engagement with points, badges, and avatars.

05

Admin Management Module

Admin functionalities like managing content and monitoring diagnostic trends.

06

Content Creation Module

Empowering mental health professionals to create and share valuable content.

UNIVERSITI TEKNOLOGI MALAYSIA

Self-Reflection

In this project, I had the opportunity to develop and apply key leadership skills and qualities that were instrumental in guiding our team toward success. Through the course of Assignments 1 to 4, I gained insights into effective team management, collaboration, and problem-solving in a dynamic, real-world project setting.

Knowledge and Skills

01 Project Planning and Management

- We used Agile principles to structure our project into manageable sprints, enabling us to achieve steady progress.
- Developed sprint backlogs to track task allocation and completion.

02 Technical Expertise

Familiarity with tools like draw.io for designing use case diagrams and sequence diagrams allowed me to contribute to system design discussions.

03 Communication and Collaboration

- Facilitated team meetings to ensure clear communication of objectives and deadlines.
- Encouraged knowledge sharing among team members to enhance productivity and learning.

04 Problem-Solving

- Addressed bottlenecks promptly by re-allocating resources or adjusting timelines where necessary.
- Helped the team resolve technical challenges during sprint execution by fostering collaborative discussions.

Picture 2 : discuss and distribute task in group through whatsapp

Leadership Qualities

- **Vision and Goal Setting**
 - Ensured the team stayed aligned with the project's vision of creating an accessible mental health platform.
 - Set clear and achievable goals for each sprint, motivating the team to deliver quality work consistently.

- **Adaptability**

Maintained flexibility in response to unexpected challenges, such as task delays or technical hurdles, while keeping the project on track.

- **Empathy and Support**
 - Actively listened to team members' concerns and provided support when needed.
 - Created a positive environment that encouraged open feedback and creative problem-solving.

- **Accountability and Responsibility**
 - Took ownership of monitoring group progress and ensuring deadlines were met without compromising quality.
 - Regularly updated the team on progress, fostering transparency and trust.

- **Decision-Making**
 - Made informed decisions during critical moments, such as prioritizing tasks or resolving conflicting opinions within the team.

A1 Progress

Opened: Monday, 4 November 2024, 12:00 AM
Due: Thursday, 7 November 2024, 10:00 AM

Upload the A1 documents progress so far. At least in your A1 document you have to highlight:

1. NABC - Needs based on problem of your stakeholder
2. What existing system you want to compare
3. Process Models you have chosen

Conclusion

“ This project has been a fantastic learning journey for me, not just in terms of leadership but also in understanding the practical aspects of software engineering. I developed skills in communication, problem-solving, and team coordination, which were crucial to keeping everything on track. The Software Engineering course introduced me to Agile methodologies, like sprint planning and iterative development, which made managing the project more organized and flexible. I also learned how important it is to focus on user needs and work collaboratively with a team. This experience has shown me how rewarding it is to see a project come to life and has prepared me to take on future challenges with confidence and adaptability. ”

THANK YOU
