3.0 User Journey Map.....	8

1.0 Introduction

The assignment focuses on conducting a heuristic evaluation and journey mapping for a given prototype. By identifying usability issues and analyzing the user experience through user journey mapping, this report aims to provide actionable insights for enhancing the system's design and functionality. The heuristic evaluation employs Nielsen's 10 usability heuristics to assess the prototype's interface, while the user journey mapping process explores the end-to-end user experience. Each phase of the user journey highlights key actions, emotions, potential pain points and recommendations for improving user satisfaction and system usability.

The prototype is a simplified version of the final product, designed to represent its core functionalities and user interface elements. It serves as a tangible model for testing and evaluation, providing a visual and interactive experience that allows evaluators to identify usability issues and gather feedback. For persona, it is a fictional character that represents a typical user of the system. Created based on user research and reflects the goals, behaviour and pain point of the target user.

Scenario describes a specific situation in which a person interacts with the system to achieve a goal. It outlines the content, tasks, and expected outcomes. User tasks are specific actions that the user needs to perform within the system. These tasks are designed to test the usability and the functionality of the prototype. By this assignment, there are three tasks that will be evaluated to identify the areas for improvement and provide actionable insights to enhance the overall user experience which is search for events or activities, join or organize events or activities and lastly give users a reward after logging their action.

2.0 Heuristics and the Severity Rating Table

Prototype Image	Identified Issue	Heuristics and Severity
	Lack of accessible help resources. There is no easily accessible help section or FAQs for users needing assistance.	H10 : Help and Documentation S2 : Minor issue
	The calendar functionality is unavailable without explanation, users may be confused about whether it is broken, disabled, or not yet implemented.	H5 : Error Prevention S3 : Major issue

	When I click 'return', it doesn't perform any action.	H3: User Control and Freedom S4 : Catastrophic issue
	For the edit page, there is no 'Delete' or 'Undo' option for accidental uploads or accidental deletions. If a user accidentally deletes an item, there is no way to recover it, leading to potential frustration.	H3: User Control and Freedom S3 : Major issue

	When I click 'Achievement', I expect to see achievement, but it redirects me to the 'Analysis' interface.	H8: Match between system and real world S3: Major issue
	The 'Schedule' and 'Screenshot' don't perform any action	H8: Aesthetic and Minimalist Design S4: Minor issue

 Sustainable Living Workshop: Small Actions, Big Impact Join us for an interactive workshop that explores how simple, everyday actions can contribute to achieving Sustainable Development Goals (SDGs). Learn practical tips, meet like-minded individuals, and take the first steps toward making a difference in your community. This event is perfect for students, educators, and anyone passionate about sustainability. Highlights • Hands-on activities and breakout discussions • Guest speakers from environmental organizations • Networking opportunities with sustainability	The share button is a standard feature in many systems. A non-functional share button disrupts this standard.	H4 : Consistency and standards S3 : Major Issue
 Search Event... Status ☒ Any Time ☐ Upcoming ☐ Ongoing ☐ Past Mode ☐ Physical ☐ Online ☐ Hybrid Level ☐ Local ☐ Regional ☐ National ☐ International Date & Time From Until	There is no immediate feedback for the selected option which means that it has no changes when user choose Mode and Level.	H1 : Visibility of system status. S3 : Major issue
 Username Password Login  Login with Google  Login with Facebook	Without a "Forgot Password" option, users who forget their passwords cannot recover their accounts easily	H9 : Help users recognize, diagnose, recover from errors S4 : Catastrophic issue

	User cannot return or navigate to another page after accessing the filter feature	H3 : User control and freedom S3 : Major issue
Analytic 	The icons (bar chart, pie chart, etc.) are generic and lack accompanying labels, forcing users to guess what type of analysis each icon represents.	H6 : Recognition rather than recall S3 : Major issue

3.0 User Journey Map

Persona and Scenario Persona: Jane, a 25-year-old community organizer passionate about sustainability. Scenario: Jane uses the SDG Connect platform to participate in local events, organize her own, and track her contributions to earn rewards.		
Task 1 Search for Events/Activities	Task 2 Join or Organize Events/Activities	Task 3 Give User Reward/Bonus Points After Logging Their Action

1. Navigate to the event search page. 2. Open the filter panel. 3. Apply filters: • Status (e.g., ongoing, upcoming). • Mode (e.g., online, physical). • Level (e.g., local, regional) • Date & Time Curious to explore but overwhelmed by filters (quote: "I wish filtering was more straightforward.").	For join: 1. See event details. 2. Click the "Join" button. 3. Messages pop out to show user join activity successfully. 4. Users can share event details. For organize: 1. Click the "Create New" button. 2. Fill in event details in all the related fields. 3. Click the "Publish" button. 4. Confirmation message shown. Happy to join but confused by ambiguous buttons (quote: "Did my event share actually work?"). Happy to create and publish but confused by ambiguous buttons (quote: "I can't find the main page again.").	1. Navigate to the Reward page. 2. Viewpoints on the upper right corner 3. Browse available rewards. 4. Clicks on a reward to redeem Satisfied with earning points but unsure how to navigate back (quote: "I can't find the main page again.").
Recommendation : Filters unintuitive.calendar not interactive.No visual feedback on button clicks, no "Share" confirmation 1. Add a "Back" button or breadcrumb navigation to allow users to return to the main page or previous step. 2. Set the calendar to be clickable.	Recommendation (join) : Confusing buttons, lack of confirmations.Ambiguous terms like "Schedule".Inconsistent functionality of "Screenshot" or "Schedule" buttons 1. If the share button is clicked, display confirmation (e.g., "Link copied to clipboard") 2. Either implement the intended functionality for Schedule and	Recommendation : 1. No "Back" button.Add a "Back" button or breadcrumb navigation to allow users to return to the main page or previous step.
